Arsenic Remediation Plan
for
Dateland Water LLC

50

April 24, 2006

Docket # W-20395A-05-0536 & W-20378A-05-0536
Decision #68656

RECEIVED
2006 MAY - 9
AZ CORP COMMISSION
DOCUMENT CONTROL

We plan to install a centralized 25 gallon per minute reverse osmosis (RO) water treatment plant that will be very effective in eliminating arsenic, fluoride and high sodium levels. The RO water treatment system is one of the most expensive when the cost of the necessary evaporation pond is considered, but it is really our only option since we want to reduce (eliminate) all three of these contaminants.
